

Hello, techie 🙌

Today we're going to talk about being dismissed. Sam Altman (Open AI's CEO) is a great example, as the case that everyone has been following.

To sum up, he faced an unexpected dismissal, triggering a domino effect of high-profile resignations and strategic conflicts within the company. Between a series of investors and boardroom battles, including Microsoft's proposal for a new position inside, today Altman had a bold return to OpenAI, still as CEO.

This gripping narrative unfolds a tale of power plays and innovation in the AI industry, keeping everyone on the edge of their seats.

That shows us how is important to leave your mark when saying goodbye, so based on that, here are 6 tips for leaving a company with a good legacy:

🕒 **Timing is everything! Know when to hit 'Esc'**

First off, timing your departure is like waiting for that perfect moment to deploy your newly coded feature, I mean, it's got to be just right. It's about recognising when you've outgrown your role, reading the room and the team working with you.

✉️ **Crafting your farewell e-mail is more than just a 'Goodbye'**

This isn't just a routine sign-out, it's a unique blend of your professional legacy and personal brand. Picture it as the last piece of code you commit, a script that resonates in chat rooms and memory banks long after you've left.

👥 **The art of sharing and uploading your knowledge**

Before you leave, think about your contribution to the open-source

community that is your workplace, share your knowledge leaving behind a legacy of wisdom and helpful 'easter eggs'. It's about ensuring that your replacement doesn't encounter a 404 error when they try to follow in your digital footsteps.

Networking 2.0 and keeping connected in the cloud:

Leaving your job doesn't mean cutting off ties. It's about staying connected, like maintaining a robust API. Consider setting up an alumni group or a collaborative tech project. This way, you're not just leaving a job, you're expanding your network. Think LinkedIn, but with more personal APIs.

Demistify all the myths about goodbyes

Let's debug a common myth: leaving a job is not a negative event, it's your chance to leave a mark. Maybe start a peculiar tradition or mentor someone to take over your role. Your departure should be a successful product launch: memorable and impactful.

Remember, no matter how far your career takes you, there's always the possibility of returning to familiar nodes and networks.

So, whether you're venturing out to new digital frontiers or navigating back to upgrade previous collaborations, **the lesson is that each step is a valuable part of your professional algorithm.**

After all, in the tech world, today's news is tomorrow's old code! 🚀

Microsoft hires former OpenAI CEO Sam Altman

Altman was fired from OpenAI on Friday after the board said it no longer has confidence in his ability to continue leading OpenAI. After a weekend of negotiations to potentially bring Altman back to OpenAI, Microsoft CEO Satya Nadella announced that both Altman and Brockman will be joining Microsoft.
